Every Kilo Counts.

As the county's only nationally approved product stewardship scheme, Refrigerant Reclaim Australia (RRA) is responsible for the collection, management, and safe disposal of surplus and unwanted refrigerant, protecting the environment and supporting Australia's transition to a more sustainable future.

WHY REFRIGERATION MATTERS

Refrigeration is not just about keeping things cold. It is essential to modern life. It protects food supply chains, preserves medicines and vaccines, supports hospitals and aged care facilities, and keeps data centres and transport systems running. Through the collection and safe disposal of recovered refrigerant, RRA ensures surplus and unwanted refrigerants don't harm the planet.

LIFE CYCLE REFRIGERANT MANAGEMENT

Recovering even small amounts of refrigerant makes a big difference. As part of Australia's national Lifecycle Refrigerant Management system, backed by strong legislation and licensing, RRA works with government, industry, wholesalers and technicians to cut emissions, protecting the environment and promoting product stewardship.

THE BIGGER PICTURE

Working with industry and technicians across Australia, RRA has collectively prevented approximately one million tonnes of carbon dioxide equivalent from entering the atmosphere each year. On average, a licensed technician prevents 11.6 tonnes of emissions annually. That's more than five times the individual limit the UN recommends to keep global warming below 1.5 degrees.

Recover every kilo during service and decommissioning.

Return it safely to your local wholesaler or gas agent.

Collect your rebate, RRA will reimburse your wholesaler.

Protect the future by reducing emissions and safeguarding the ozone layer.
